 - Toolchange activated by standard machine TOOLCALL
 - TOOLCALL requests outside maximum toolchanger to active manual toolchange
- Activation of secondary software limits for installation of toolchanger

Toolchanger Cover

- Automatic tool cover to offer protection from swarf

Tool Pocket Detection

- Monitoring of tool pockets to prevent accidental miss loading of tool

Benefits

Allows for unmanned machining operation and is therefore ideal for machining of production parts. The Table Mounted Toolchanger offers an easy upgrade for the CNC machine tools

Positioning/Location

The Toolchanger has tennon location and position stops for quick and easy relocation of the toolchanger, therefore can be quickly installed or removed at your convenience.

Large Tooling

Due to the table mounted design it has the added advantage of accepting tools up to 250mm in diameter and 500mm in length.

Options to suit both machine and budget

To accommodate various machine, production and financial requirements, we offer the system with different options so that you may configure the toolchanger to suit both your machine tool and budget requirements.
